MEASURE & SHARE

windguru 

Dear Club!

You may know of *Windguru* from our global wind forecasting for wind fanatics. Only Poseidon knows everything about the weather on the sea, but for the past 15 years we have done our best to make the forecasting service as accurate as possible!

Windguru and Windguru Wind Stations measure and share data for major events in windsurfing and kiteboarding such as the PWA Tour, the Virgin Kitesurfing Armada, and the Red Bull King of the Air. We already have 25 Windguru Wind Stations running with the sailing and kiteboarding clubs in the UK alone and more than 300 worldwide.

Now, we are ready to offer *Windguru Live*, our customized weather service, directly to sailing clubs. When coupled with your Windguru Wind Station, Windguru Live will allow you to access incredibly accurate, real-time wind conditions and forecasts for your area, with customized forecasts and wind maps.

The Windguru Live service is based on data reported by Windguru Wind Stations that we developed together with our scientists and Czech engineers two years ago. The Windguru Wind Station reports average, minimum and maximum wind speed and direction every minute, as well as temperature. The Windguru Wind Stations uses the US-made Davis anemometer for accuracy and durability. It is plug-in & play, no IT knowledge is required to install and operate,

and it makes the measurements online automatically. All it needs is electricity and internet available within 250 meters of the installed location.

You can embed the *Windguru Live Icon* in your club website for easy access, so that your club members or visitors can access the customized, all-in-one weather information directly through your club's main page.

Windguru Live is an important marketing tool that makes your club visible on the Windguru website, all for one price of £290 + VAT or €400 + VAT, delivery for free. No additional costs or fees.

For more details on *Windguru Live and the Windguru Wind Station*, please see our brochure. If you have any questions or would like any additional information, please do not hesitate to contact us.

Live Wind Profile

Live wind data is becoming more important for all of us, it is good to be in time for sailing or riding!

Once you measure all the people that are interested in wind in your area will know who provides live wind info for them, the Station owner has got its logo on the live wind profile, this marketing on windguru is part of the service.

As a Station owner you can also have Windguru Live. Attached directly to your homepage, showing current wind, wind graph, and forecast for your location easily, no IT experts required.

If you already measure live data, share the data with us and get the benefits described below.

Windguru major upgrade for all smart devices will be released soon.. Stay tuned!
